9. Marks will be awarded only to the sections and subsections clearly indicated as per the problem statement/exercise/question

Preamble:

The aim of this course is to train the students in the design and implementation of compilers and various components of a compiler, including a scanner, parser, and code generator. The students are exposed to GNU compiler, construction tools and their application. Students are trained to design and implement a compiler for a simple language.

Develop a compiler for a subset of C language with the following features:

- Minimum two data types
- Minimum two control statements
- Minimum two looping statements
- Input-output functions
- Compound statements and Array
- Arithmetic operations (addition with semantic analysis)
- Assume Operators, Symbols and Reserved keywords

Your report should include:

A1.1 Identification and grouping of Tokens

A1.2 Implementation in *Lex*

A1.3 Design of Context Free Grammar for each function

A1.4 Implementation in YACC

A1.5 Results and comments
